

International Cooperation

The international relations of DECHEMA

Scientific Cooperation takes place on a global scale. Since the very beginning cooperation with both national and international scientific societies has been one of DECHEMA's guiding principles.

Cooperations in Europe:

[European Federation of Chemical Engineering](#)

[European Federation of Corrosion](#)

[European Association for Chemical and Molecular Sciences](#)

[European Process Safety Centre](#)

Worldwide Cooperation:

WCEC [World Chemical Engineering Council](#)

Scientific cooperation links DECHEMA with many countries of the world, especially with Japan, the USA, China, Argentina and the countries of Eastern Europe. Exchange of students and lectures, joint research projects and continuing education courses abroad, and courses for lectures from developing countries strengthen these links. Honorary Delegates represent the interests of DECHEMA throughout the world.

European and international Standardization

DECHEMA promotes world-wide technical and scientific cooperation by standardization of laboratory devices and equipment. Objectives are comparable measurement results, technology transfer, reduction of trade barriers and a high safety level in laboratories. Important partners besides most European countries are China, Egypt, India, Russia and USA.
